PROFILE

Integrated MSc Software Systems student with hands-on experience developing full-stack, database-driven, and AI-powered applications. Skilled in Java, Python, C++, JavaScript, TypeScript, React.js, Node.js, SQL, and REST APIs, with strong foundations in DSA, OOP, and DBMS. Passionate about solving real-world problems through scalable, efficient, and user-focused software solutions.

EDUCATION

Integrated MSc Software Systems, 3rd Year
Coimbatore Institute of Technology

2024 – 2029
Coimbatore

SKILLS

Programming Languages

Python, Java, C, C++

Backend Development

Node.js, Express.js, PHP

Version Control & Collaboration

Git, GitHub

Frontend Development

HTML, CSS, JavaScript, React.js, Angular

Database

MySQL, MongoDB, PostgreSQL, Oracle (PL/SQL)

Areas of Interest

Full Stack Development, Software Development, AI-Powered Applications, Cloud & Database Systems

ACHIEVEMENTS & CERTIFICATIONS

Smart India Hackathon 2026 — Internal Round

Contributed to VeloPulseAI, an AI-powered predictive maintenance and vehicle telematics solution, as part of a multidisciplinary team.

Introduction to Front-End Development

Completed training in HTML, CSS, JavaScript, responsive web development, and UI engineering.

ACADEMIC PROJECTS

RouteVeda – Intelligent Travel Planning Platform 🔗

Tech Stack: React.js, TypeScript, Node.js, PostgreSQL, PostGIS, REST APIs

- Developed a full-stack travel planning platform for multi-stop itinerary creation, destination management, and route planning.
- Engineered REST APIs, location-aware routing, and PostGIS-based geospatial queries for efficient destination mapping and route management.

FinvisIQ — Personal Finance Intelligence Platform 🔗

Tech Stack: Java, JavaFX, CSS, MySQL

- Developed a personal finance application for expense tracking, budgeting, financial insights, and data visualization.
- Structured modular workflows for financial record management and analytics, supporting maintainable application architecture.

Smart Hospital Bed Management System 🔗

Tech Stack: 8086 Assembly Language, JavaScript, PHP, HTML, CSS MySQL

- Designed and implemented an end-to-end hospital resource system with priority-based patient scheduling and automated bed allocation.
- Integrated JavaScript triage assessment, PHP middleware, session management, ward/resource validation, and ICU, bed, oxygen, and doctor availability tracking.

VeloPulseAI – Predictive Maintenance & Real-Time Telematics System

Tech Stack: Python, Machine Learning, AI, Predictive Analytics

- Collaborated in a multidisciplinary team to develop an AI-powered predictive maintenance system integrating vehicle telemetry, sensor anomaly detection, failure forecasting, and real-time fleet analytics.
